AISBackup Restore of Documents from Windows XP to Windows 7 or Windows Vista.

Introduction

This document shows the procedure from restoring your documents from a backup made with AISBackup on Windows XP to a new PC containing Windows 7 or Windows Vista. The following items will be restored:

- All documents including pictures and music.
- E-mail: Outlook express is no longer part of Windows but this document shows you how to restore and import Outlook Express e-mail into Windows Mail.
- The Windows Address Book will be imported directly from the backup.
- The AISBackup registration key will be restored and used to register AISBackup on the new PC.

This document assumes that you have already installed the trial version of AISBackup on the new PC and the backup is on an external drive that is connected using the USB interface to the new PC. The actual backup you use may be on other media such as CD, DVD, FTP or a network drive.

Part 1: Restore documents.

Documents on Widows XP usually reside under the folder C:\Documents and Settings\<your user name>\My Documents and this folder contains additional folders called My Pictures, My Music etc. Windows 7 and Windows Vista changed this slightly by essentially renaming C:\Documents and Settings to C:\Users and making some of the sub folders of My Documents the same level as the newly names *Documents* folder. However Microsoft introduced some normally hidden linked folders to maintain compatibility with software that access folders like C:\Documents and Settings directly.

AISBackup: Restore XP Documents to Windows 7 or Windows Vista.

The restore of Documents and Settings will use the new linked folders to ensure that the documents, pictures and music are restored to the new directory structure without having to perform several separate restores.

In this example the backup is on a USB external drive that has already been connected to the new PC, the drive is called *Eternal1*. AISBackup has also been installed but is still the trial version, however we will be restoring the registration key file from the backup.

Right click AISBackup and choose Run as administrator.

Confirm that you are allowing AISBackup to make changes to the computer by clicking Yes.

You can see by clicking pictures that the pictures have been restored to the correct folder.

Part 2: E-mail.

The default install e-mail client on Windows XP is Microsoft Outlook Express and this is the e-mail client that was used on this version of Windows XP. Windows Vista and Windows 7 does not support Outlook Express but instead uses a new product called Windows Mail. Windows Mail isn't preinstalled on Windows 7 so this document will also show you how to install it.

First we will restore the Outlook Express folders to a new folder called *XP Outlook Express* under *Pauline's* folder.

	- Favorites	1/3/2010 10:37 AM	Filefolder
A Pauline	📝 Links	11/14/2009 8:08 AM	File folder
Contacts	🛃 Music	1/3/2010 10:36 AM	File folder
